**How to  
Implement?**

```
void test() {  
    // code 1  
    #ifdef CLOUD  
        // code 2  
    #endif  
    #ifdef RAIN  
        // code 3  
    #endif  
    // code 4  
}
```

**!CLOUD and !RAIN**  
**CLOUD and !RAIN**  
**!CLOUD and RAIN**

```
void test() {  
    // code 1  
    #ifdef CLOUD  
        // code 2  
    #endif  
    #ifdef RAIN  
        // code 3  
    #endif  
    // code 4  
}
```

Solve portability  
problems

Simple technique

No *overheads*

Maintenance problems

Poor understandability

Subtle to errors

#ifdefs

# Undisciplined vs. Disciplined Annotations

```
#if (WIN32)
if ((ready = select(0, NULL, tp))
#else
if ((ready = select(max_fd + 1, NULL, tp))
#endif
    == -1) {
    ngx_log_error(NGX_LOG_ALERT);
    return NGX_ERROR;
    if (ready == -1) {
        err = ngx_socket_errno;
    } else {
        err = 0;
    }
}
```

```
#if (WIN32)
    ready = select(0, NULL, tp);
#else
    ready = select(max_fd + 1, NULL, tp);
#endif
if (ready == -1) {
    ngx_log_error(NGX_LOG_ALERT);
    return NGX_ERROR;

# Colligens

FeatureIDE   CppCheck

Eclipse

Core

TypeChef

The screenshot shows the Colligens interface for refactoring C code. On the left, the 'Original Source' tab displays the initial code:

```
example1.c
Original Source
void test(){
    int row = 0;
    int current, first, last = 0;

    row = getRowNumber(current
#define A
        , first, last
#endif
    );
}
```

On the right, the 'Refactored Source' tab shows the modified code after applying the refactoring:

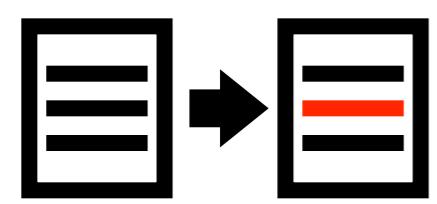

```
Refactored Source
void test () {
    int row = 0 ;
    int current,first,last = 0 ;

#if defined(A)
    row = getRowNumber (current, first, last);
#endif

#if !defined(A)
    row = getRowNumber (current);
#endif
}
```

The interface includes standard toolbars and navigation buttons at the bottom: '?', '< Back', 'Next >', 'Cancel', and 'Finish'.

**Ongoing work...**

"If my memory serves correctly, it was just a refactoring to simplify the code and make it a little more understandable."

libpng

"Because using conditional for only part of one high level instruction makes it less understandable and is likely to raise issue over long time maintainance."

# The Discipline of Preprocessor-Based Annotations

**Does `#ifdef TAG` n't `#endif` Matter**

*and let TAG be disabled!*

# A Catalog of Refactorings to Discipline Preprocessor-Based Annotations
